 Title of invention: A hair drier
 Abstract: [ABSTRACT]

Reservoir and air inlet to accommodate hair process liquid having a bur hole of hair process liquid are disposed by an interior of reservoir, hair process liquid in pump and the reservoir which injection tip turns to a blowport and same direction in the vicinity of a blowport, and was installed in is pressurized to injection tip of pump, because pump final control element making jet is comprised, it is possible in blasting of hair process liquid and desiccation and brushing at the same time, buck in of hair is facilitated.
